## CIP Easy Car Key Programmer

programmes keys and much more

## CIP: Car Lock Systems Immobiliser Programmer

New at Car Lock Systems: the CIP. This unique tool enables you as a car repair shop to programme keys from your own workshop very quickly. And this goes for almost all car brands and models! With the CIP, even pre-encoding so-called code-2 keys (all Fiat-based models) is very easy. Just like many other kinds of programming.

### Shorten your delivery time with the CIP

- Within **24** hours, you will receive a coded key in your workshop.
- Within **15** minutes, we will programme the key remotely for you.

### Easy Programming

Via the CIP, you can connect a car or commercial vehicle to one of our diagnostic specialists. He or she will give you some simple instructions. The key programming - or any other CIP service of your choice - will be done in no time.

### Lots of services you can offer in-house

For almost all car brands, you can have a wide range of programming carried out from your own workshop. The car stays in one place, saving you time for other work. Moreover, with the CIP you yourself have control over the costs.

# Secure and flexible programming from your own workshop

Car Lock Systems ensures the **security** of your customers. Naturally also while using the CIP.

✓ **secure connection**

We provide the best possible protection for your data.

✓ **exclusively for automotive**

We only supply automotive companies.

Make your offering even more **flexible** with a wide range of CIP Services.

✓ **programming of keys and remote controls**  
(both OEM and our own collection)

✓ **pre-coding of code-2 car keys**  
(all Fiat-based models)

✓ **reading out PIN codes**

✓ **various kinds of programming**  
(headlights, tow bars, airbags, etc.)

✓ **calibration of various components**

✓ **programming when replacing modules**

✓ **diagnostics and technical assistance**

✓ **or one of the many other CIP Services**

## This is how to start well-prepared

### What does the CIP pack consist of?

The pack contains 1 CIP, 1 OBD cable, 1 screwdriver set and 1 reset pin. In addition, you will receive the **CIP quick start manual** with clear explanations and tips.

### Other than the CIP pack, what else do you need to use the CIP?

- a smartphone, tablet, laptop or PC
- a good WiFi connection\*
- a vehicle to connect to
- your login details (you will receive them by e-mail after purchasing the CIP)
- a car key (if you want to have this programmed)

\* The CIP is also operable using an Ethernet connection or via a hotspot.

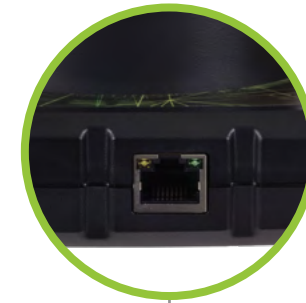

### Can I get help during the CIP installation or when using the CIP?

Of course! We have a special CIP Helpdesk for all questions relating to the CIP. You can find the contact details on the reverse of this leaflet. We are here to help you!

## How to connect via the CIP

Use an OBD cable to connect the CIP to any vehicle. Now follow the instructions in the **CIP quick start manual** to connect to Car Lock Systems.

Via an orange and a green LED you can see whether the CIP is successfully connected to the Car Lock Systems server.

key holder

### Connecting the CIP to another network

Would you like to use a different network than the one in your workshop? For example if you are travelling or in a different location? This is possible! The provided reset pin allows you to connect the CIP to another network in a few minutes.

order now at [www.carlocksystems.com](http://www.carlocksystems.com)

## How to order a CIP Service fast

### Order through [www.carlocksystems.com](http://www.carlocksystems.com)

Log into our website and enter the chassis number of the vehicle. Are you ordering a key? The **CIP logo** indicates whether the key is CIP-compatible.

If you want to have the key programmed, you select 'yes'. Once you have received the key you ordered, connect the CIP to the car to have the key programmed. The CIP will recognise the vehicle and automatically find the programming you ordered in advance. Other CIP services, such as tow bar programming, can be found at the top right in your ordering screen under the 'CIP Services' tab. You can also order these services in advance.

Do you want to have the key programmed?

- 1 +

### Order through the CIP

In addition to pre-ordering, it is also possible to select a CIP Service from the overview of all possible CIP Services from the moment you connect the CIP to the vehicle. The service you have selected will be started directly.

*"As a universal automotive business, we have been saving a lot of time since the purchase of the CIP. Car Lock Systems provides clear support, making it easy to use. So far, we have been very satisfied with the CIP and all the services offered by the Car Lock Systems team. Keep it up!"*

*André Arzbach - owner of Autobedrijf Zuiderkogge*

*"We've chosen the CIP because we got stuck programming ECUs and keys. Starting up and installing the CIP was done within a day. The CIP is very user-friendly."*

*Paul Kooijman - owner of 2K Auto's*

Are you interested in the CIP for your automotive business?

Feel free to contact us for more information any time.

## How to make the most of the CIP

### Programming of keys and remote controls

The CIP programmes keys for almost all car brands while keeping the car in one place. Our specialists 'take over' the vehicle from you and programme the keys in an instant. You no longer have to drive the car to (another) dealer, which saves a lot of time and money.

### Pre-encoding and programming code-2 keys

Certain keys are based on a so-called code-2 system. Think of Fiat, Alfa, Lancia, Iveco and all other Fiat-based models. New code-2 keys can be ordered from the factory. This is often a long and difficult process. That is why we now offer a special (self-developed), coded key/remote control. Through the CIP, our diagnostic specialist reads the pre-coding from the car. Then you insert the new key into the key holder of the CIP. This will code the transponder correctly within a few minutes. Then we programme the key to the car. Pre-encoding is also possible for a number of commercial vehicles with code-2 keys.

### Get the PIN/transponder code from the vehicle

The CIP can also read PIN/transponder codes from the vehicles of lots of brands. This provides a great advantage when, for example, ECUs or control units are replaced. The codes recorded in the factory during production are often no longer correct. Removing them directly from the vehicle prevents malfunctions.

### Perform diagnostics and interval resets

The CIP is so much more than a key programmer. You can also use additional diagnostic and programming services with the CIP. In particular, the CIP can perform diagnostics and service interval resets on vehicles of lots of brands, including brands that are unfamiliar to your car repair shop.
